

TANZEEL AFTAB

OPERATIONS DATA
ANALYST

tanzeel.github.io

tanzeelq@gmail.com | Srinagar, Jammu and Kashmir | +91 9149651440

SUMMARY

Data Analyst with 1.5+ years of experience in operations analytics and BI, with hands-on experience building Python-based data pipelines, machine learning workflows, time-series forecasting, and Generative AI applications. Built and deployed an AI-powered BI platform combining ARIMA forecasting, customer segmentation, RAG, vector search, and an LLM business advisor.

EXPERIENCE

EVERISE (VIA TIBIL SOLUTIONS) (January 2025- present)

Data Analyst

- Track real-time SLA, shrinkage, and agent occupancy; publish daily Power BI dashboards for management.
- Automated ETL pipeline using Python (Pandas) + Excel Macros, cutting reporting time by 30%.
- Write complex SQL queries (Window Functions, CTEs) for root-cause analysis on metric dips.

ONCABS (2024)

Web & Analytics Manager

- Tracked user behavior via Google Analytics; built weekly Excel dashboards for marketing.

EDUCATION

Islamic University of Science & Tech (2024 - 2026) 7.5
Master of Computer Applications

Islamia College of Science and Commerce (2020 - 2023) 7.45
Bachelor of Computer Applications

SKILLS

BI & Viz: Power BI (DAX, Power Query), Advanced Excel (Macros, Pivot Tables)
DB & Code: SQL (Joins, Window Functions, CTEs), Python (Pandas, Matplotlib)
AI/ML: ARIMA, K-Means, RFM, RAG (Groq/Pinecone)
Cloud: Vercel, Railway, MongoDB Atlas

PROJECTS

TR-INSIGHTFORGE - BUSINESS INTELLIGENCE PLATFORM

Objective: Enable small business owners with zero data-science background to upload raw data and instantly receive forecasts, customer intelligence, and AI-driven strategic advice.

Key Modules & Implementation:

- **Revenue Forecasting:** Built ARIMA model (statsmodels + pmdarima) with auto-parameter tuning. Achieved MAPE $\approx$ 5% on retail sales. Intelligent fallback to linear trend for datasets with < 6 months history—never fails on small data.
- **Customer Segmentation:** Engineered RFM + K-Means (Scikit-learn) to auto-segment customers into Champions, Loyal, At-Risk, and Needs Attention—each with auto-generated retention strategies. Rule-based fallback for < 4 customers.
- **AI Business Advisor:** Built RAG pipeline—converted business KPIs into vector embeddings (Pinecone) + integrated Groq Llama 3.3-70B API. Users ask plain-English questions (e.g., "Which customers are likely to churn?") and get answers strictly grounded in their own data.
- **Tech Stack:** React (Vite/Tailwind) | FastAPI | MongoDB Atlas | Pinecone | Groq. Cloud-ready (Vercel + Railway).

POWER BI DASHBOARDS

- **Kashmir Tourism:** Analyzed district-wise tourist footfall and seasonal patterns across J&K. Identified peak seasons (May–Sep) and underperforming districts, providing actionable recommendations to boost off-season tourism via targeted marketing campaigns for "hidden gem" destinations.
- **Walmart Sales:** Tracked MoM growth, regional profit margins, and category performance using advanced DAX (CALCULATE, SAMEPERIODLASTYEAR) with drill-through for store-level analysis.

SQL DATA EXPLORATION

- Wrote complex queries using Window Functions (RANK, ROW_NUMBER, LAG/LEAD), CTEs, and multi-table JOINS to solve real-world problems—top categories, customer retention rates, and lifetime value analysis.
